

SPARK PLUG INDEXER PART #62160

FITS: Flat and Tapered Seat 14mm Spark Plugs.

1. Index one set of spark plugs using your present method.
Remove one plug at a time and screw into the Indexer Tool.
2. Scribe a mark on the flat surface of the Indexer Tool that corresponds with the end of the electrode. Make sure to scribe the cylinder number above the mark that identifies the electrode position. Repeat for all remaining plugs.

TIP: It is easier to read the Indexer if you place half of the marks on one side and half on the other.

3. Once a mark for each cylinder is scribed onto the Indexer Tool, screw in new spark plugs to determine into which cylinder they will index properly.

Remember, all cylinder heads are different. A separate Spark Plug Indexer should be used for each set of heads.
